3"	1/2"	49152
4"	5/8"	49154

Hangers

Spring Vibration Isolation Hangers

- Steel springs reduce vibration transmission most efficiently as performance improves with larger deflection.
- Minimum deflection is 0.75" which increases with heavier loadings.
- Spring deflection are 2-6 times better than the neoprene products.
- Hangers have neoprene cups under the springs to prevent sound transmission.
- A projecting rubber bushing prevents sound transmission if hanger rods are not perfectly centered.
- Finish is powder coated paint

Part No.	Vendor No.	Capacity	Color	Rod Size	Width	Height
0459890	HS-X-76	55 - 76 lb	Black	3/8"	2-7/8"	4"
