How to use the Heat Index:

- 1.) Across top (Air temperature) locate today's predicted high temperature.
- 2.) Down left side (Relative Humidity) locate today's predicted humidity.
- 3.) Follow across and down to find "Apparent Temperature" or "What It Feels Like"

Heat Index Values were devised for shady, light wind conditions. Exposure to full sun can increase values by up to 15°. Strong winds, particularly with hot, dry air can be extremely hazardous.
