Magna-Tite® Rivet (Structural)  
Aluminum  
The Magna-Tite® Rivet is ideal for installation in thin, low-strength materials such as composites, thin sheets of aluminum, fiberglass and plastics.  

An applied watertight seal makes this rivet especially suitable for oversized holes and repair applications. A large blind-side footprint also makes the fastener ideal for installation in thin or low-strength materials such as aluminum, fiberglass and plastic.

Huck Bolt® C6L LockBolt Fasteners  
Small Diameter LockBolts. A high-strength, vibration-resistant lock bolt. Available in a variety of head styles.  
- High Strength and Vibration  
- Various Head styles and Materials Available  
- Speed of Installation  
- Consistent Controlled Clamp

LockBolt Fasteners and Collars are sold separately.

C6L Lock bolt Collars  
A high-strength, vibration-resistant lock bolt. Available in a variety of head styles.

LockBolt Fasteners and Collars are sold separately.
