# CUSTOM DESIGNED AND MANUFACTURED BRASS PRODUCTS

Established in 1828, RuB is a family owned company traditionally committed to the production of brass products, with specific development of ball valves in a wide range of applications in the most diversified fields - hydraulic, pneumatic, automotive, marine, food processing, plumbing, heating, refrigeration, building automation, industrial, recycling, sewage and many others.

Throughout almost two centuries, a most responsive

understanding of market

needs and tireless

and exacting search

for quality and

innovation have

led to progressive

and constant growth

of our company, now

distributing its products to

key users and major OEMs in over

50 countries worldwide.

Our mission is to provide a competitive

product that is best performing

and most cost effective.

We offer our customers a comprehensive

package of services: state of the art

engineering and design capability, modern

precise machining, highly automated process

control with gaging and testing at every

stage, managed by a qualified staff.

Flexibility and control are continued through the whole process, right through product packaging and shipping. These key factors make RuB a highly reputable supplier, capable of fulfilling the most varied customer requirements.

This sharp focus on quality and innovation has allowed us to achieve excellence of system and products, acknowledged not only by the ISO9001:2000 certification that

Lloyd's Register has awarded

us and the CE mark, in

compliance with the

prescriptions of PED

97/23/CE European

directive, but also

by the large number

of type approvals our

products have earned in

most industrialized countries

worldwide - DVGW, British Gas,

WRAS, ETA, CSA, UL, FM, AGA, PUB,

cUL, GOST, just to mention

the main ones.

Product traceability is provided, in

compliance with European specifications.

Our organization undergoes continuous

screening by third party approval inspectors

and also by customer audits from such fields

as automotive, refrigeration, heating, and

building automation.

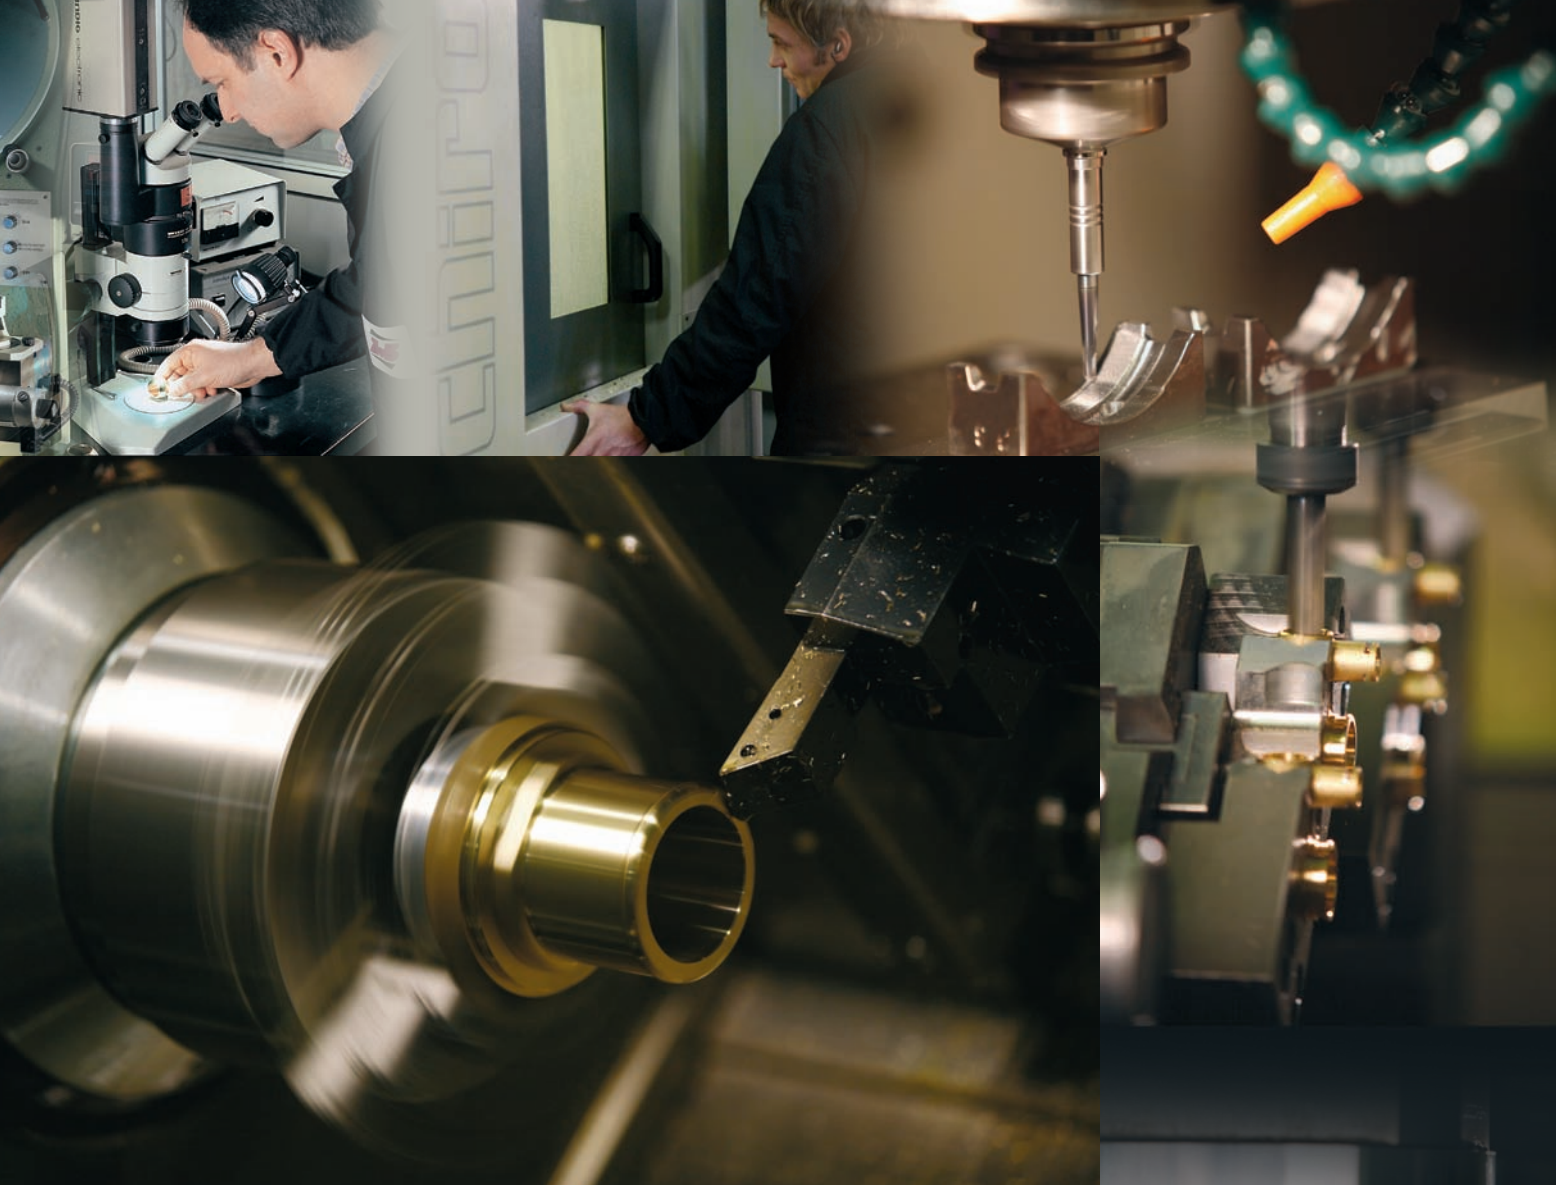

The quality of RuB products starts from raw materials: we only use first class certified brass, and seals made from virgin PTFE and Viton, provided by approved suppliers.

All our products and processes are silicone free, thus most suitable also for the automotive and paint industries.

Our plant, with 14,000 m<sup>2</sup> (150,000 ft<sup>2</sup>) houses transfer machines specifically designed for the manufacture of 1/8" through 4" valves and components, advanced CNC machine tools, and single and multi-spindle automatic lathes. Among our key strengths is our capability to provide fully automated assembly of large series products.

Design, machining, assembly and testing of components and most of our manufacturing tools are all made in-house, which sharply reduces lead time and improves control and management.

With its extensive know-how and long term experience, our Engineering Dept. is also available to work closely with our customers at every stage of special product development, from design, to prototype to final production. RuB manufactures, assembles, and tests 60 million parts per year. To assure product quality this involves about 400,000 tests and measurements per day. Product designs are qualified with cycle life testing, burst tests, bending and torque tests. Each production valve is pressure tested twice, including a 24 hour (or longer) pressure retention test, the most severe production test in the industry.

All RuB standard valves go through extensive validation tests, including burst, life, bend, impact, operating torque and sealing tests. For special products, we can

offer miscellaneous testing to best suit the specific customer requirements.

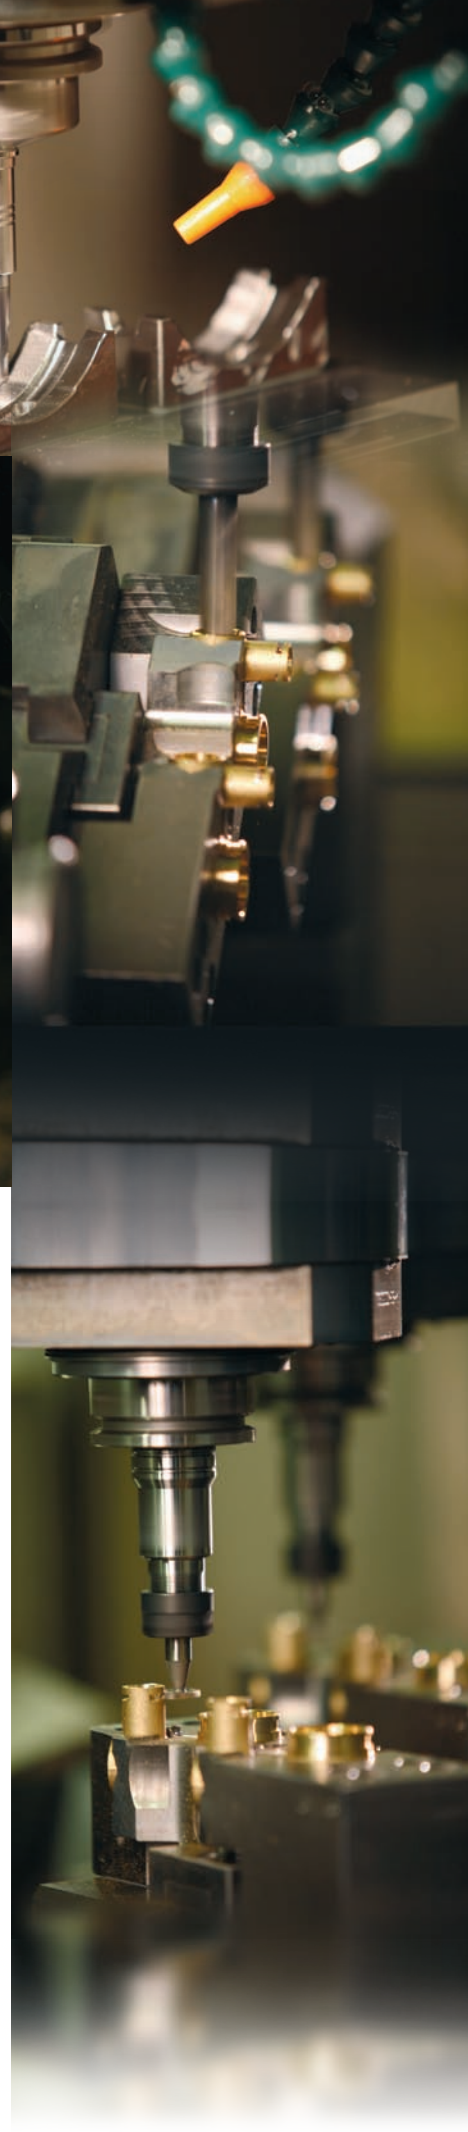

Furthermore, RuB can offer valuable solutions not only in brass but also in aluminium and steel.

Quality and productivity are constantly monitored by integrated systems that retrieve real time information from production and manage work load of each resource.

A wireless barcoded integrated system governs handling and storage, providing exact information of quantity and location of all materials.

Barcoding may be provided on master cartons and inner boxes along with customer's logo, part numbers and packaging quantity.

If you need a customized product, at RuB you will find the services you need - a fast, flexible world of quality.
