Notes

1, 2, 3

1. Compatible denotes commercially available nut having suitable mechanical properties and dimensional configuration or style which will make it possible to obtain the desired bolt load. Higher strength nuts may be a suitable substitute provided bolt standard allows.
2. Galvanized nuts are intended for use with externally threaded fasteners that are hot-dip or mechanically galvanized or have a coating of sufficient thickness to require over-tapping of the nut to provide assembly.
3. ASTM A194 2H heavy hex nut may be used in lieu as a substitute for ASTM A563 DH heavy hex nut
